INTRODUCTION

Essence and status of the scientific challenge in general terms, its theoretical and (or) practical significance; connection with important scientific or practical tasks; relevance of research and its importance for the further development of the relevant field of law (theory or practice).

Analysis of recent research and publications directly relevant to the subject matter; highlighting previously unresolved aspects of the general problems which the paper covers; the purpose of the study) – at least 5 links.

MATERIALS AND METHODS

In this section, the materials and methods used in the research are described. It is important to detail the specific approaches, techniques, and tools utilized in the study.

RESULTS

Basic principles and results of scientific research, personal ideas, thoughts, scientific facts obtained, detected patterns, relationships, tendencies, methods of obtaining and analyzing factual material, and the personal contribution of the author in the achievement and implementation of conclusions.

DISCUSSION

Which researchers have dealt with a similar problem and what aspects they considered, and indicate that the aspect the author is considering was not considered in previous studies.

CONCLUSION

The most important results of the study as a synthesis of the scientific information accumulated in the body of text, i.e. a consistent, clear, logical statement of the most important results of the research obtained by the author personally and following the stated purpose, containing scientific novelty and having theoretical and (or) practical significance.
